

**Weeping Hemlock (tree form)**

*Tsuga canadensis 'Pendula (tree form)'*

Height: 10 feet

Spread: 10 feet

Sunlight: ○ ● ●

Hardiness Zone: 4a

Other Names: Canadian Hemlock, Eastern Hemlock

**Description:**

A fine evergreen accent tree with gracefully pendulous branches and fine textured foliage, an unforgettable sight; best used as a solitary specimen; needs organic, acidic soil, adequate moisture and shelter from drying winds

**Ornamental Features**

Weeping Hemlock (tree form) is primarily valued in the landscape or garden for its highly ornamental weeping form. It has dark green evergreen foliage which emerges light green in spring. The needles remain dark green throughout the winter.

**Landscape Attributes**

Weeping Hemlock (tree form) is an evergreen tree with a strong central leader and a rounded form and gracefully weeping branches. It lends an extremely fine and delicate texture to the landscape composition which can make it a great accent feature on this basis alone.

This tree will require occasional maintenance and upkeep, and is best pruned in late winter once the threat of extreme cold has passed. Gardeners should be aware of the following characteristic(s) that may warrant special consideration;

- Insects

Weeping Hemlock (tree form) is recommended for the following landscape applications;

- Accent
- General Garden Use

### **Planting & Growing**

Weeping Hemlock (tree form) will grow to be about 10 feet tall at maturity, with a spread of 10 feet. It tends to be a little leggy, with a typical clearance of 1 foot from the ground, and is suitable for planting under power lines. It grows at a slow rate, and under ideal conditions can be expected to live for 50 years or more.

This tree performs well in both full sun and full shade. It does best in average to evenly moist conditions, but will not tolerate standing water. This plant does not require much in the way of fertilizing once established. It is not particular as to soil type, but has a definite preference for acidic soils. It is quite intolerant of urban pollution, therefore inner city or urban streetside plantings are best avoided, and will benefit from being planted in a relatively sheltered location. Consider applying a thick mulch around the root zone in winter to protect it in exposed locations or colder microclimates. This is a selection of a native North American species.
